Lyceum turns real job postings into a course decision with receipts, every semester, inside the tools lecturers already use.

After class, Dr Aisyah, a fictional lecturer, is asked what her course should change before the next review. She can suggest a change; she cannot show why. The evidence sits in browser tabs and in memory: no exact sentences from employers, no denominator, no record of who decided.

WHY NOW

WORLD

39%

of workers' existing skills, employers expect, will be transformed or become outdated between 2025 and 2030, while approving a new degree programme takes 12 to 18 months at the US universities cited

World Economic Forum, Future of Jobs Report 2025; Wayne State University, programme approval; Texas Tech University, new programme timelines

ASIA

77%

of 10,095 Asia Pacific employers could not find the skills they needed in 2025, up from 45% in 2014 (a vendor survey)

ManpowerGroup, Talent Shortage 2025

MALAYSIA

32.2%

of employed Malaysian graduates, 1.60 million people, worked below their qualification in 2024, while 3.2% of graduates in the labour force were unemployed

DOSM, Graduates Statistics 2024

Desk research, one comparison for each level, until interviews with lecturers add a quotation per level. The figures describe different populations, so they are never one chart.

THE GIFT: A RECEIPT

Every requirement Lyceum counts is an exact sentence from a real posting, with its employer, its dates and its link, counted over a known denominator.

Stripe · Data Analyst, Intern · published 2026-10-01

> "You'll build metrics, scalable data pipelines, dashboards, and reports to inform and run the business."

1 of 9 reviewed postings

stripe.com/jobs/search?gh_jid=8194291 · retrieved 2026-10-09 · fnv1a-68604535-974

THE PLAN: ONE LOOP, SIX STEPS, EVERY SEMESTER

Setup: Course

Folio

What does this course promise today?

Watch

Scout

What are employers asking for, right now and over time?

Report

Atlas, Lens and Steward

What exactly do they ask, how often, and what does the course do about it?

Decide

People decide

What will we do, and who said so?

Update

Quill

What does the approved change look like, within our hours and rules?

Teach

Prism

What will the class do, and with what?

Learn

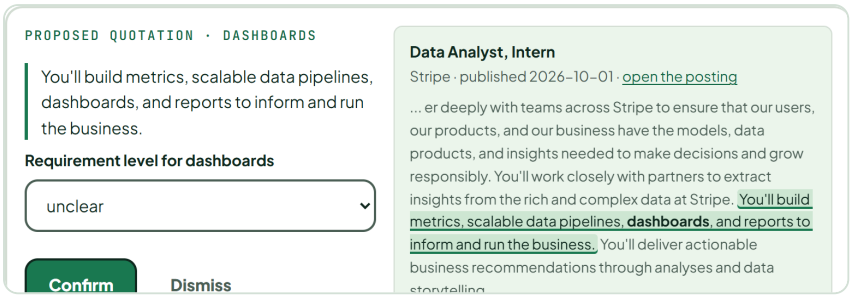

Lens

Did it work, as far as we can honestly tell?

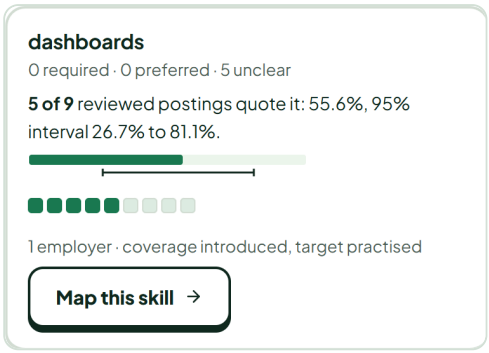

Seven helpers do the work; at Decide there is none, because people decide. Tualang, the host, keeps the loop, and every semester adds a ring.

THE JOURNEY, IN REAL SCREENS

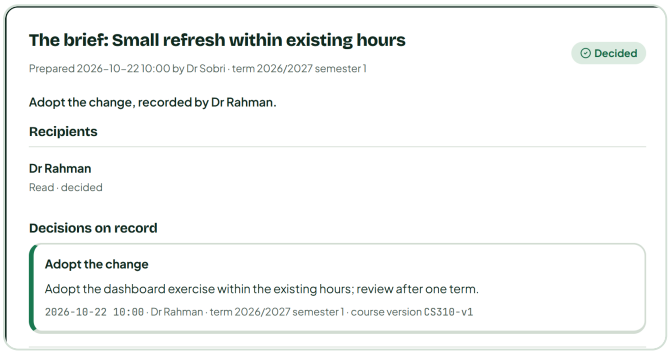

Each step ends in a record she can hold.

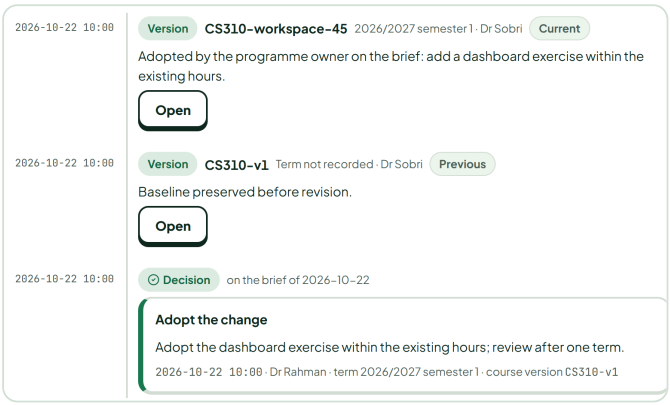

Report. A quotation is proposed beside its source, and confirmed only if it is there word for word.

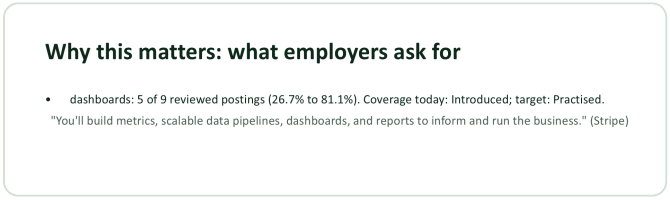

Count. Over reviewed postings only, with its interval.

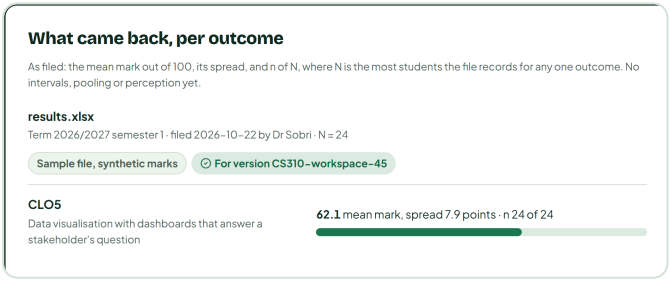

Decide. The programme owner records adopt, with the reason, the term and the version.

Update. The checked revision, adopted with its reason; the earlier version is kept.

Teach. The downloaded pack as PowerPoint draws it: editable, with no model text.

Learn. Results filed for the version taught, with n of N. No learning gain is claimed.

Real captures of the working prototype in its demo mode, on the dated saved sample of Stripe's public job board.

WHAT IS REAL, AND WHAT IS NOT YET

TRL 6

Self-assessed against NASA ESTO's software column: "Prototype implementations of the software demonstrated on full-scale realistic problems." The relevant environment: real postings from a real public board, a sample course outline, a lecturer persona.

185

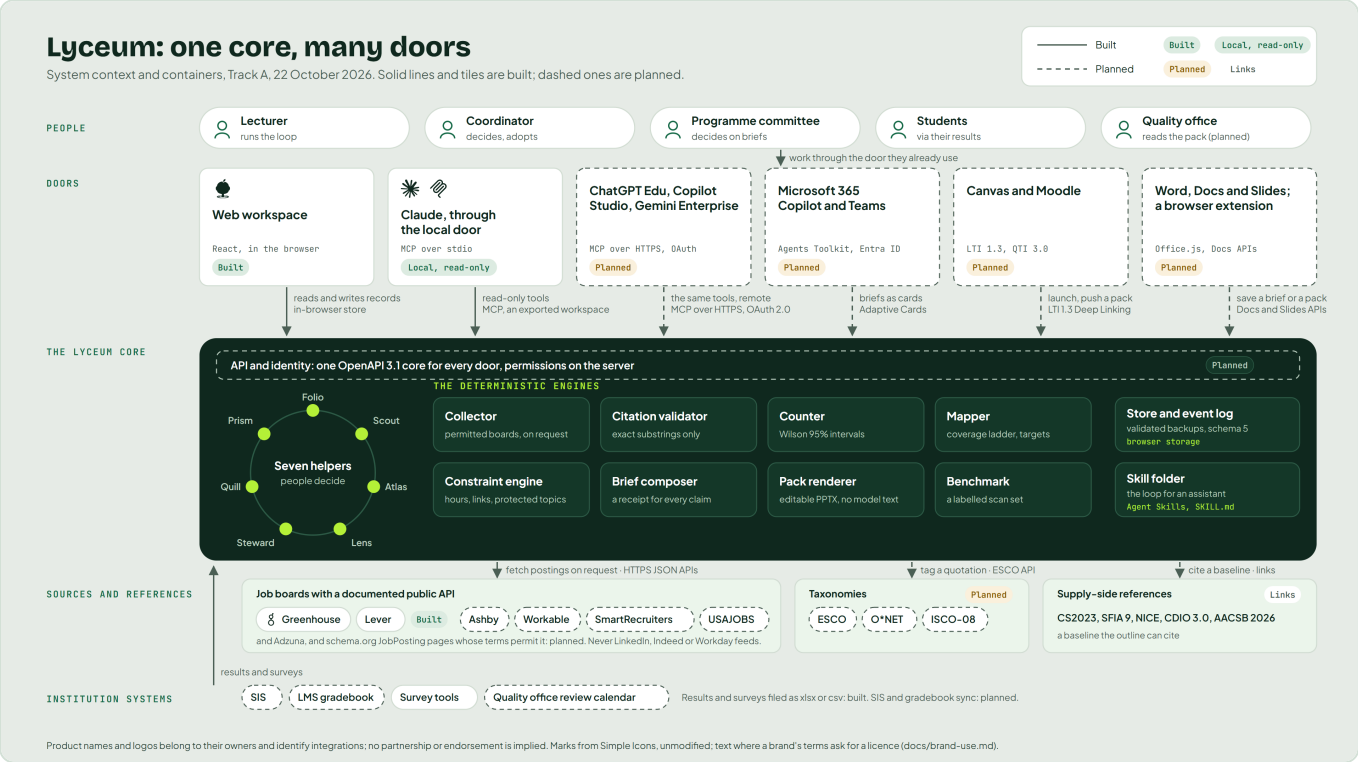

automated checks passed on 22 October 2026, plus four headless browser runs.

PLANNED **Not built yet**

- Remote doors for ChatGPT Edu, Copilot and Gemini
- The LMS door for Canvas and Moodle
- Learn's intervals, pooling and the perception gap
- The benchmark run against the CLO survey
- Watching on a schedule
- A shared workspace with sign-in

The next level is one department running the loop for one term inside its LMS.

THE WIDER WORLD: ONE CORE, MANY DOORS

The web workspace is built, and so is a local, read-only MCP door over an exported workspace, set up for Claude and tested with the official MCP client. The doors for the university's own assistants, its LMS and its office suite are planned. No door confirms a quotation or decides.

WHY A DEPARTMENT PAYS

Free BUILT

One course on one laptop, no account, the whole loop and every export.

Department PLANNED

The shared workspace, sign-in, the assistant and LMS doors, the term's review pack.

Institution PLANNED

Tenancy, audit, the office suite doors and data agreements.

The periodic review happens anyway, and each step is the working form of what reviewers already look for: AUN-QA 1.4, MQA 6.1.6, ABET Criteria 2 and 4, ESG 1.9, and for Teach the teaching principle of constructive alignment (Biggs).

THE ORGANISER'S REVIEW OF 14 OCTOBER 2026, AND WHAT WE DID

DONE **Less wordy, more visual: give the agents mascots and living personas.**

A host and seven helpers, drawn in code, whose moods follow real records; in the app, the deck and the poster.

STARTED **Research the problem beyond Malaysia, at Asia and world level.**

One sourced comparison each for the world, Asia and Malaysia, labelled desk research. Interviews with lecturers in at least three Asian countries come next.

DONE **Make the flow of the app and the flow of the pitch tally.**

One loop with the same six names in the app, the demo, the deck and this brief; the film follows the same order.

PLANNED **Benchmark the mock cohort against the SSRT and CLO surveys.**

Predictions frozen before a semester and scored against that semester's CLO survey and results. Not run yet.

THE ASK

One department, one term, inside its LMS.

The pilot measures task completion, citation fidelity, time to a brief and repeat use: measures, not results yet.
